Description

The SKY13353-337LF is a GaAs pHEMT Double-Pole, Double-Throw (DPDT) switch designed for 0.5 to 3.0 GHz diversity WLAN applications that use two antennas for both transmit and receive paths.

The device provides high linearity, low insertion loss, and high isolation. Switching is controlled by four control voltage inputs (CTRL1, CTRL2, CTRL3, and CTRL4). Depending on the logic voltage level applied to the control pins, the four RF ports (RF1, RF2, RF3, and RF4) are connected together using a low insertion loss path, while maintaining a high isolation path to the alternate ports. Series DC blocking capacitors are required on all RF ports for proper operation.

The SKY13353-337LF is provided in a 3 x 3 mm, 12-pin Quad Flat No-Lead (QFN) package. A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

6	N/C	No connection required. May be connected to ground with no change in performance.	12	N/C	No connection required. May be connected to ground with no change in performance.

Note: Exposed pad must be grounded through a low impedance path.

Table 2. SKY13353-337LF Absolute Maximum Ratings

Parameter	Symbol	Minimum	Maximum	Units
Control voltage	CTRL1, CTRL2, CTRL3, CTRL4		+6	V
RF input power	P _{IN}		+34	dBm
Operating temperature	T _{OP}	-40	+85	°C
Storage temperature	T _{STG}	-40	+125	°C

Note: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

CAUTION: Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY13353-337LF are provided in Table 2. Electrical specifications are provided in Table 3.

The state of the SKY13353-337LF is determined by the logic provided in Table 4.

Typical performance characteristics are illustrated in Figures 3, 4, and 5.
